EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Daniel Wehner, Ph.D. on 28 July 2009. The application has been amended as follows:

1. A method for creating a voice response grammar in a voice response server, the method comprising:

i. identifying a user for a presentation, the user having a user grammar, the user grammar including one or more user grammar elements for a content type, each user grammar element including an identifier of a structural element, a key phrase for invoking a presentation action, and a presentation action identifier representing a presentation action;

ii. identifying presentation documents for the presentation, each presentation document having a content type, wherein the content type indicates a format of the presentation document;

iii. selecting user grammar elements according to the content type of the identified presentation documents; and

iv. storing a multiplicity of user grammar elements for the user in a voice response grammar on a voice response server, including storing the selected user grammar elements in the voice response grammar.

Allowable Subject Matter

2. Claims 1-2 and 4-8 are allowed. The following is an examiner's statement of reasons for allowance: The Abstract of Bryan discloses creating, using, and updating individual user voice portals in a multi-user environment through grammars consisting of vocabulary words or audio macros that speech recognition hardware and software recognize for a particular user. Bryan at paragraph 0034 discloses that those audio macros are the words the listener assigns to access either a specific source or piece of information. Bryan, however, does not disclose identifying a user for a presentation, the user having a user grammar, the user grammar including one or more user grammar elements, each user grammar element including an identifier and structural element as claimed in the present application because Bryan does not disclose a user grammar as claimed in the present application. The claims of the present application recite that a grammar includes one or more user grammar elements for a content type, which indicates a format of the presentation document (e.g., slideshow, .pdf, word processing document, etc.). Bryan does not teach selecting user grammar elements according to the content type of the identified presentation documents. It is noted that Bryan, at paragraph 0062 actually discloses: [0062] According to an important aspect of the invention, topic radio engine 104 presents one or more templates to each user to collect information from the user regarding information sources, search keywords, search time windows, and audio macros for accessing search results. In this

embodiment, these templates are stored in topic radio template database 108. The particular template presented to an individual user may depend on the type of user. For example, if the user is a cardiologist, the template may contain lists of medical journals from which information may be extracted. Alternatively or in addition to user- tailored templates, users may be presented with generic templates, such as news templates, weather templates, sports templates, etc., that allow users to define audio macros and data sources for these categories of information. In another example, if the user is an individual investor, the template may contain stock information and allow the user to select stock information to be included in his or her voice portal. If the user is a company, the template may allow the user to select from information provided on the company's web site. Once the user completes the templates, the template is stored in topic radio template database 108 and used in providing a unique voice portal for a particular user. Bryan's templates neither teach nor suggest selecting user grammar elements according to the content type of the identified presentation documents as claimed in the present application, wherein the content type indicates a format of the presentation document. Bryan fails to teach presentation documents with associated content types. Bryan does not teach or suggest selecting user grammar elements as claimed in the present application.

Further, for at least the reasons above and for further limiting the claim language, dependent claims 2 and 4-8 are also allowed.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
